DEC-O-VENT®

Are you a home builder, home owner, or distributor of products for homes, businesses, landscape or concrete? We have a new product for your foundation vent wells.

**Beautifies
& Protects
Foundation
Vents**

The Problem

With sub-grade foundation vents water can get under the home which can lead to insulation failure, mold build up and dry rot. Air supply under the home can be diminished due to debris build up in existing vents which only exacerbates the problem. Unfortunately most foundation vents are constructed using materials that decompose over time leaving the foundation vent wells exposed to outside elements which can wreak havoc on your home.

The Solution

Dec-O-Vent blocks water and debris from entering the foundation vent and enhances airflow under structures. The drain plate is adjustable to fit your installation needs and allows water to drain away from the foundation. The innovative and decorative lid design allows for increased airflow when compared to traditional foundation vents. The unit is comprised of high impact, lightweight, ABS materials that will not deteriorate, rust or corrode. Dec-O-Vent comes neatly packaged and is ready to install; instructions are provided to jump start your installation.

The Result

Superior airflow under the structure, no unsightly debris build up near foundation vents and the reduction of moisture around the foundation. It's easy to install for new construction, remodels, landscaping and foundation vents for cement patios or sidewalks that abut buildings.

Dec-O-Vent Features:

- Proper blocking out of foundation vents when the ground in front of a vent needs to be blocked for adequate air supply.
- The unit is stackable and will allow for any number of variations in height in order to achieve the desirable finish grade.
- Has a two position drain plate built-in for ease of adjustment and to carry any excess water that may enter the vent well portion of this unit.
- Comes in four different colors so that the only exposed portion of the unit will most likely match the surrounding grade.
- The Lid is UV protected for added life.
- The free air supply of the lid is rated 125% of a typical foundation vent. It has a free air supply rating of 86 square inches and meets all building code requirements for foundation vents.
- Comes with instructions and a one year warranty.

Available in Four Colors:
